

LEVON KHORASANDZHIAN

Backend Developer | Java

Moscow, Russia | Open to onsite, hybrid, and remote roles

lakhorasandzhyan@edu.hse.ru | t.me/yungflaeva | [+7 916 017-19-26](tel:+79160171926) | github.com/lkhorasandzhian

EDUCATION

Higher School of Economics

Moscow, Russia

B.Sc. in Computer Science, Software Engineering

Aug 2021 – Jul 2025

M.Sc. in Computer Science, Data Engineering

Oct 2025 – Jul 2027

Relevant Coursework (GPA: 8.5/10): Algorithms and Data Structures, Software Systems Architecture, C# Programming, Software Construction (Java), Distributed Databases and Data Warehouses, NoSQL Databases, Computer Architecture, Requirements Engineering, Software Development Tools, Software Quality Assurance and Testing

PRACTICAL EXPERIENCE

Yandex Backend Development Summer School

Moscow, Russia

Team business project “Advertising Campaign Auditor”

Jul 1 – Aug 31, 2026

As a team, developed an advertising campaign audit service that aggregates data from Yandex Direct and Yandex Metrica, detects business rule violations, and generates recommendations. Designed the API and modular architecture and implemented external data integrations, error handling, logging, and tests for the core logic. At the final stage, the generated report is processed by a neural network model to improve the structure and readability of the recommendations

PROJECTS

Product Catalog Service | *Java, Spring Boot, Spring MVC, JDBC, Liquibase, PostgreSQL, Docker* Nov 2025

- Progressively evolved Product Catalog Service from a console Java application with file serialization into a multi-module Spring Boot REST service with dedicated controller, service, and repository layers
- Implemented a REST API for CRUD operations, partial updates, product search and filtering, user registration and login, role-based operation restrictions, and audit log retrieval
- Migrated persistence to PostgreSQL: developed JDBC repositories using `PreparedStatement` and HikariCP, implemented database-generated identifiers, and configured Liquibase migrations to create schemas, tables, and initial data automatically
- Implemented Jakarta Bean Validation, DTO mapping with MapStruct, unified REST error responses through `@RestControllerAdvice`, and an LRU search-result cache with invalidation after catalog changes
- Automated action auditing and service execution-time measurement with Spring AOP; extracted this functionality into custom `audit-starter` and `logging-starter` modules with conditional auto-configuration and an enabling annotation
- Added JDBC integration tests with PostgreSQL, Testcontainers, and Liquibase, as well as WebMvc tests for REST controllers using MockMvc and Mockito; integrated Swagger UI and Docker Compose for the local database

TECHNICAL SKILLS

Java Core: Collections, Generics, Stream API, Exceptions, Concurrency

Backend: Spring Framework, Spring Core, Spring Boot, Spring Data, Spring MVC, Spring Web, Spring Security, AOP, JDBC, JPA, ORM, Hibernate

Databases: PostgreSQL, MS SQL Server, MongoDB

Build Tools: Apache Maven, Gradle

Tools: Git, Docker, Linux, Postman, Swagger, Javadoc, Yandex Cloud

Testing: JUnit 5, AssertJ, Mockito, Testcontainers

LANGUAGES

English: B2

Russian: Native
